Context

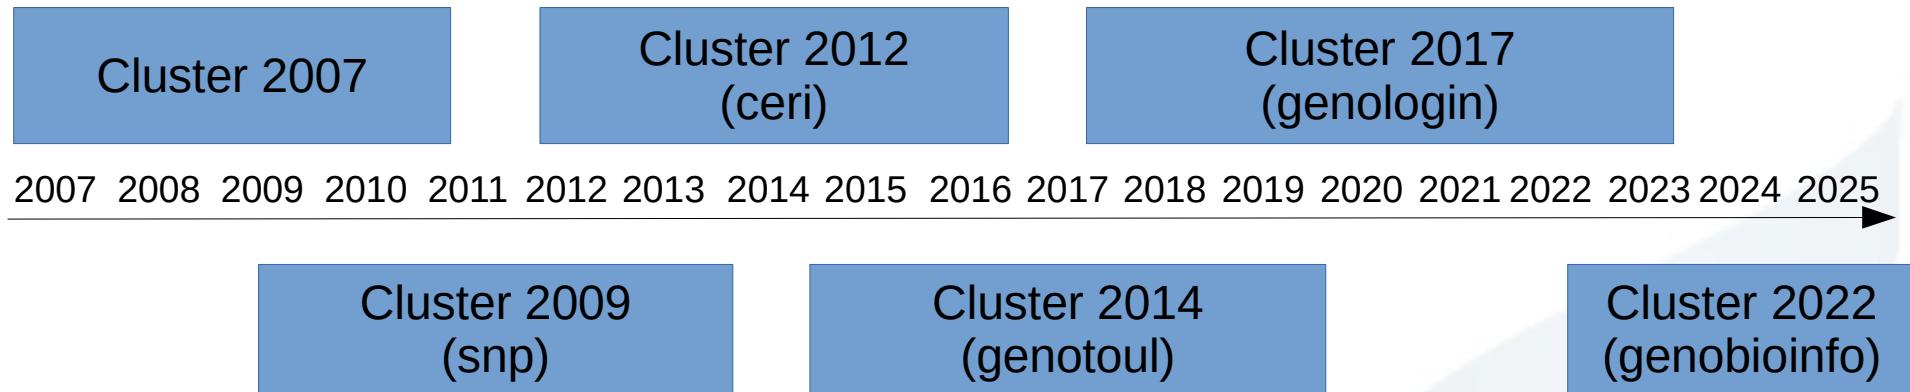

PRE-REQUISITE : LINUX

- connect to « genobioinfo » server
- Basic command line utilization
- File System Hierarchy
- Useful tools (find, sort, cut, grep)
- Transferring & compressing files

TODAY

- How to use compute nodes cluster (submit, manage & monitor jobs)
- Objectives : Autonomy, self mastery

Context renewal strategy

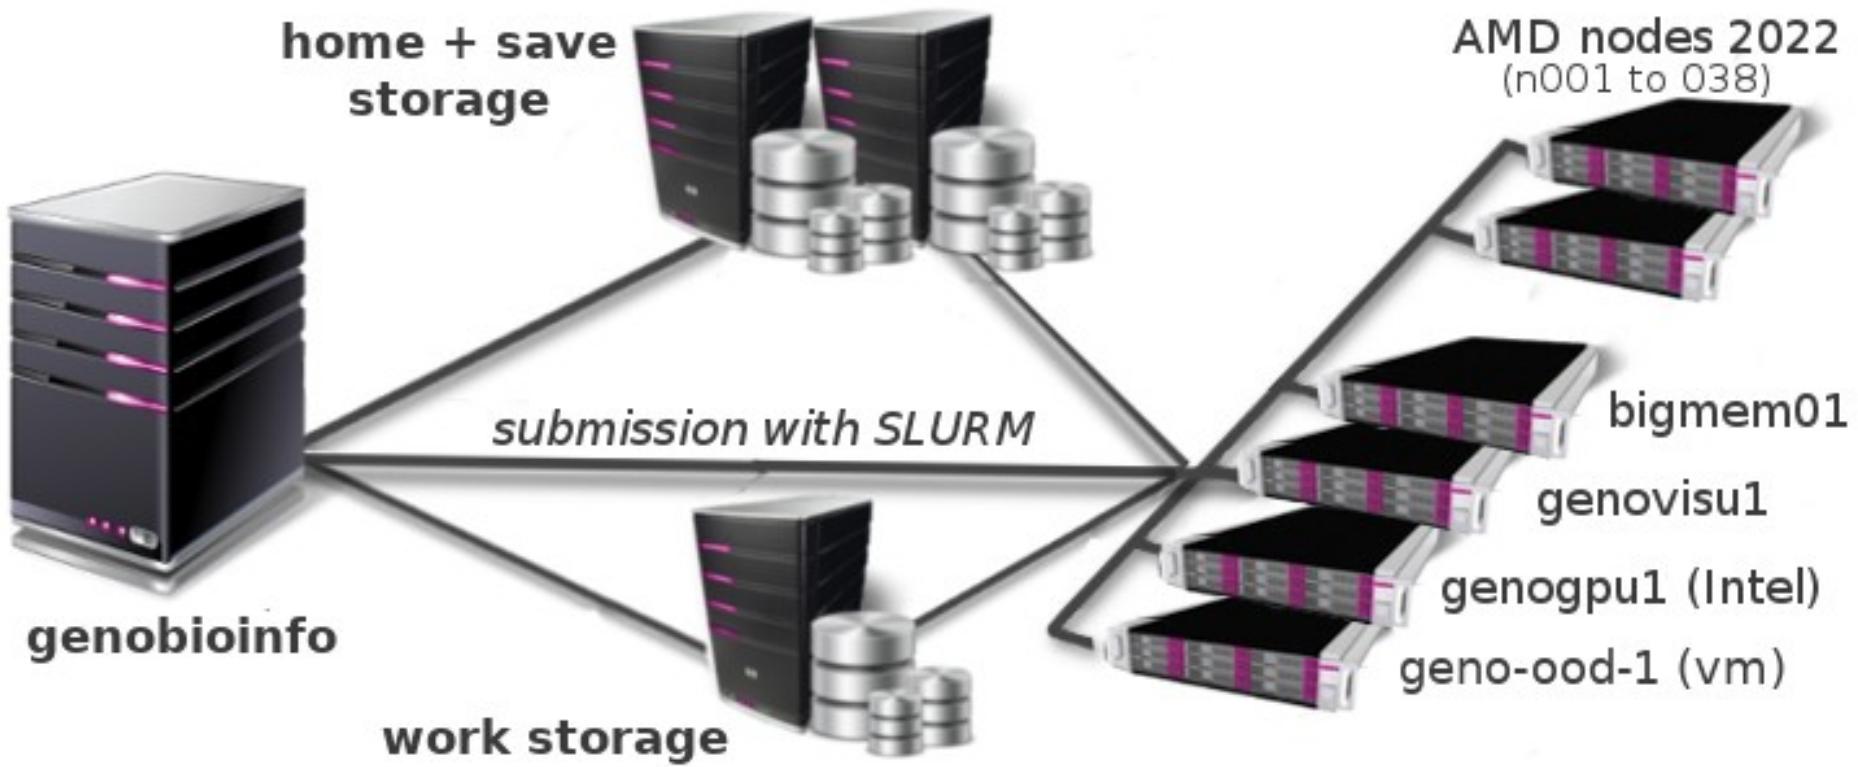

- Overlapping clusters enabling to keep the service active and to renew the machines
- SLURM job scheduler from 2017 (before=SGE)

Infrastructure

Infrastructure login & compute nodes

login nodes (genobioinfo.toulouse.inrae.fr)

- 2 login nodes : genobioinfo1&2 * (32 cores, 512 GB RAM)
- Linux based on RedHat-8 distribution
- Hundreds of users simultaneous
- Secured (ssh only)

Infrastructure login & compute nodes

login nodes (genobioinfo.toulouse.inrae.fr)

- To serve development environments
- To test his script before data analysis
- To launch jobs on the cluster nodes
- To get data results on the /save directory

Infrastructure login & compute nodes

Compute nodes

Name	Nb cores	RAM (GB)	GPU
N001 à 38	128	2048	N/A
bigmem01	128	4096	N/A
visu01	128	512	RTX6000
gpu01	128	1024	A100/80G

Infrastructure login & compute nodes

Compute nodes

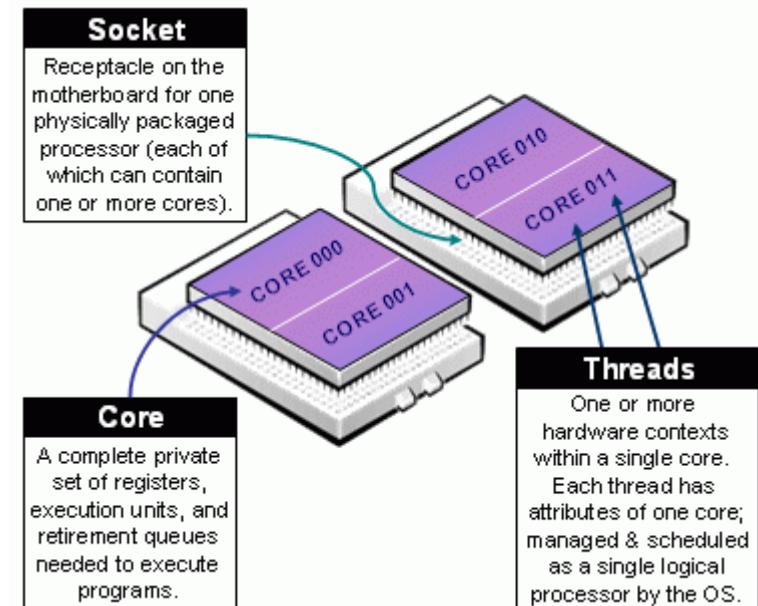

- Low latency & high bandwidth interconnection (100Gb/s)
- Interactive mode : for beginners / for remote display
- Batch access : for intensive usage (most of jobs)
- No direct ssh access to the nodes
- Workspace exactly the same as login nodes (exception read only on /save directory)

Cluster / Node

- Cluster : a set of compute nodes
- Node : a computer with multi-processors and huge memory

Socket / Core

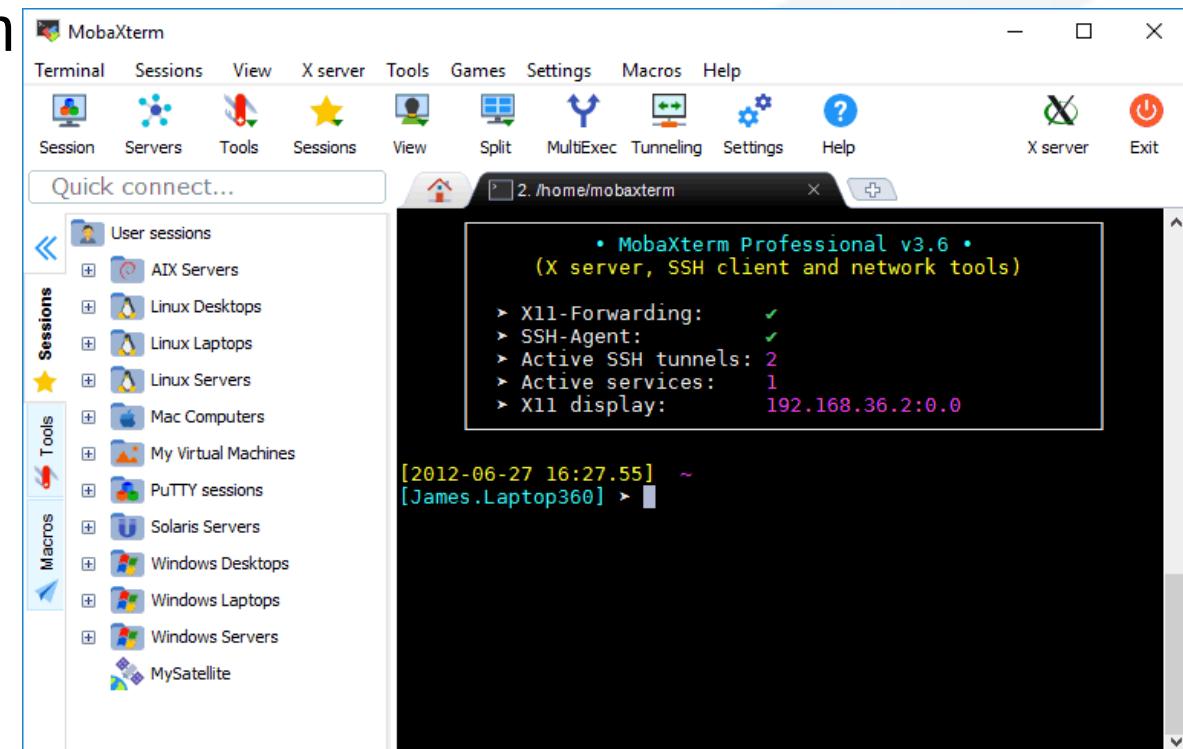

- Socket: Central Processing Unit (CPU)
- Core : multi-core in a CPU
- Thread (multithreading desactivated)
=> 1 core = 1 thread

Infrastructure

User account

- Access to the login servers: **genobioinfo** (1 or 2)
- Linux / Mac : via command line SSH connection
ssh <login>@genobioinfo.toulouse.inrae.fr
- Windows : via MobaXterm

Infrastructure

Disk spaces

- All of directories are the same between genobioinfo servers & cluster nodes (you don't have to copy anything)
- Examples :

/home, /save, /work : user (or project) directories

/bank : international genomics databanks

/usr/local/bioinfo : Bioinformatics software

Infrastructure

User quotas

- **10GB** for **/home** directory (configuration files only)
- **250GB (*2)** for **/save/user** directory (permanent data, with replication)
- **1TB** for **/work/user** directory (temporary compute disk space)
- **100,000H** annual **calculation time** (500H for private user)
You could have more time on demand (resource request)

Refresh your linux knowledge:

<https://genotoul-bioinfo.pages.mia.inra.fr/linux-cluster/cluster/tp1.1/>

Or (if it doesn't work)

<http://vm-genoword.toulouse.inrae.fr/Training/cluster/tp1.1/>

Environment

Search/Find a soft (Web)

Website (Resources/Software): <http://bioinfo.genotoul.fr/index.php/resources-2/softwares/>

All software

Application	Description	Availability/Use
<u>3D-DNA</u>	3D de novo assembly (3D-DNA) pipeline.	Genologin Cluster: How to use Genobioinfo Cluster: How to use
<u>AAF</u>	This is a package for constructing phylogeny without doing alignment or assembly.	Genologin Cluster: How to use Genobioinfo Cluster: Ask for Install

Environment

Environment modules

The **Environment Modules package** provides for the dynamic modification of a user's environment via modulefiles.

module command alter or set shell environment:

- add command in your PATH
- define specific environment variable
- add path to dependencies
- add path to specific libraries

Modules can be loaded and unloaded dynamically.

Modules are useful in managing different versions of applications.

Environment Search examples

module search cutadapt

----- /tools/modulefiles -----
bioinfo/Cutadapt/1.8.3: loads the bioinfo/Cutadapt/1.8.3 environment
bioinfo/Cutadapt/4.3: loads the bioinfo/Cutadapt/4.3 environment

module search blast

----- /tools/modulefiles -----
bioinfo/NCBI_Blast+/2.9.0+: loads the bioinfo/NCBI_Blast+/2.9.0+ environment
bioinfo/NCBI_Blast+/2.10.0+: loads the bioinfo/NCBI_Blast+/2.10.0+ environment
bioinfo/NCBI_Blast/2.2.26: loads the bioinfo/NCBI_Blast/2.2.26 environment
bioinfo/RMBlast/2.13.0: loads the bioinfo/RMBlast/2.13.0 environment
bioinfo/WuBlast/2.0a19: loads the bioinfo/WuBlast/2.0a19 environment

Software usage

Run a soft

Run a software

To run a software you need to load the corresponding module.

module load <module_name>

To run a software with others software dependencies, you need to load all required modules.

Best practices

Check modules already loaded : **module list**

Purge modules already loaded if not needed :

module purge (all modules)

module unload module_name (only one module)

Software usage

Usage examples

Use Bismark-0.24.0

```
module search bismark  
module load bioinfo/Bismark/0.24.0
```

```
which bismark  
/usr/local/bioinfo/src/Bismark/Bismark-0.24.0/bismark
```

```
Bismark --help
```

Use Python-3.7.9

```
module search python  
module load devel/python/Python-3.7.9
```

```
which python  
/tools-devel/python/Python-3.7.9/bin/python
```

```
python --help
```

Software usage

Module command

module : (no arguments) print usage instructions

module search search_module : display available versions for a specific application

module avail : list available software module

module load module_name : add a module to your environment

module unload module_name : unload remove a module

module purge : remove all modules

module show module_name : show what changes a module will make to your environment

module help module_name : path to the "How_to_use_SLURM_<soft_name>" file

For more documentation, see the Environment Module website :

<http://modules.sourceforge.net/>

Software documentation

- official software documentation in the installation folder
`/usr/local/bioinfo/src/<soft_name>/<soft_version>`
- our website Software page: **link to software website.**

Use on SLURM cluster

- "**How_to_use_SLURM_<soft_name>**" file:
 - software installation directory `/usr/local/bioinfo/src/<soft_name>`
 - our website Software page (Availability/Use column, click on SLURM cluster link).
- a basic « **example_on_cluster** » directory in the software installation directory
`/usr/local/bioinfo/src/<soft_name>/example_on_cluster`

LICENSE:

The MIT/Expat License

See software documentation for more informations.

Location: /usr/local/bioinfo/src/samtools

Load binaries and environment:

(include bgzip,tabix,htsfile)

-> Version v0.1.19

module load bioinfo/samtools/0.1.19

-> Version v1.10

module load bioinfo/samtools/1.10

-> Version v1.14

module load bioinfo/samtools/1.14

-> Version v1.18

module load bioinfo/samtools/1.18

Example directory for use on cluster:

/usr/local/bioinfo/src/samtools/example_on_cluster

To submit: sbatch test_samtools-1.14.sh

Help

example : samtools (2)

ls /usr/local/bioinfo/src/samtools/

example_on_cluster

How_to_use_SLURM_samtools

Install

samtools-0.1.19

samtools-1.10

samtools-1.14

samtools-1.18

- **Find "How_to_use_SLURM_<soft_name>" file path**

module help bioinfo/samtools

Module Specific Help for /tools/modulefiles/bioinfo/samtools/1.18:

See How_to_use file:

/usr/local/bioinfo/src/samtools/How_to_use_SLURM_samtools

- **Browse all "How_to_use_SLURM_<soft_name>" files** (in your web browser)

https://web-genobioinfo.toulouse.inrae.fr/How_to_Softs/ (new cluster)

- **Updated FAQ:** <http://bioinfo.genotoul.fr/index.php/faq/>
<http://vm-genoword.toulouse.inrae.fr/FAQ/> (under construction)

SLURM

- Simple Linux Utility for Resource management
- Adopted by the academic community
- Supported by IT providers
- New features
- <https://slurm.schedmd.com/>

RedHat-8

- Leader on enterprise operating systems
- Supported by IT providers
- Cgroups (Control Groups) compatible

SLURM

Submission commands

Job submission

[INTERACTIVE]

- **srun --pty bash** : submit an interactive session with a compute node (default workq partition).
- **srun --x11 --pty bash** : submit an interactive session with X11 forwarding (default workq partition)

[BATCH]

- **sbatch** : submit a batch script to slurm.
- **sarray** : submit a batch job-array to slurm
- **scancel** : kill the specified job

Job monitoring

- **sinfo** : display nodes, partitions, reservations
- **squeue** : display jobs and state
- **scontrol show** : get informations on jobs, nodes, partitions
- **sview** : graphical user interface
- **sacct** : display accounting data
- **seff** : display consumed ressources (time, cpu, ram)

Submit your first job:

<https://genotoul-bioinfo.pages.mia.inra.fr/linux-cluster/cluster/tp1.2/>

Or (if it doesn't work)

<http://vm-genoword.toulouse.inrae.fr/Training/cluster/tp1.2/>

Training day

 - Job array
- Best practices
- Support

SLURM

Default parameters

- **workq partition**
- **1 node**
- **1 thread = 1 core**
- **2GB RAM memory per core = 2GB here**
- 100KH annually compute time (more on demand)
- 10000: max jobs number for all users
- 2500: max jobs number per user
- 2500 : max tasks number in a job array

SLURM sbatch script

```

# !/bin/bash

#SBATCH --time=00:10:00           #job time limit
#SBATCH -J testjob               #job name
#SBATCH -o output.out            #output file name
#SBATCH -e error.out             #error file name
#SBATCH --mem=8G                 #memory reservation
#SBATCH --cpus-per-task=4         #ncpu on the same node
#SBATCH --mail-type=BEGIN,END,FAIL #event notification
#SBATCH --mail-user=firstname.lastname@inrae.fr #user email

module purge                      #Purge any previous modules
module load bioinfo/ncbi-blast-2.2.29+ #Load the application
blastall ...                       # My command line I want to run on the cluster

```

SLURM Directives (1/2)

-p workq	partition name
--time=00:10:00	job time limit
-J testjob	job name
-o output.out	output file
-e error.out	error file name
--mem=8G or --mem-per-cpu	memory size

SLURM Directives (2/2)

--cpus-per-task=4	ncpu on the same node
--mail-type=[events]	event notification
--mail-user=[address]	user email
--export=[ALL NONE variables]	copy environment
--workdir=[dir_name]	working directory
--wrap="command"	With sbatch to submit directly one command"

SLURM Partitions

- Each job is submitted to a specific partition (the default one is the workq).
- Each partition has a different priority considering the maximum time of execution allowed.

Partitions (queues)	Access	Nb Nodes	Max time	Max threads
workq	everyone	39	4 days (96h)	4992
unlimitq	everyone	39	90 days	4992
interq (VISU)	on-demand everyone	1	12h	128
gpuq (GPU)	on demand	1	8 days	128

SLURM Ressources

- There are job limitations on users + group of users
- It depends on your linux group : contributors / INRAe or OCCITANIE / others
- It is the same thing for the RAM memory (1 thread = 16GB)

Partition / max threads	workq (group)	workq (user)	unlimitq (all)	unlimitq (user)
Contributors	5184	750	780	500
INRAe or Occitanie	3888	500	780	376
Others	1296	250	780	100

Multithreading

<https://genotoul-bioinfo.pages.mia.inra.fr/linux-cluster/cluster/tp2/>

Or (it it doesn't work)

<http://vm-genoword.toulouse.inrae.fr/Training/cluster/tp2/>

Training day

SLURM cluster

- Context
- Infrastructure
- Environment
- Software usage
- Help section
- SLURM
 - Basics
 - Tunning
 - Job array
- Best practices
- Support

sbatch -a | array=<indexes>

Submit a job array, multiple jobs to be executed with identical parameters.

Multiple values may be specified using a comma separated list and/or a range of values with a « - » separator.

Example :

--array=1-10

--array=0,6,16-32

--array=0-16:4 #a step of 4

--array=1-10%2 #a maximum of 2 simultaneously running task

Variable	Correspondance
SLURM_ARRAY_TASK_ID	Job array ID (index) number
SLURM_ARRAY_JOB_ID	Job array's master job ID number
SLURM_ARRAY_TASK_MAX	Job array's maximum ID (index) number
SLURM_ARRAY_TASK_MIN	Job array's minimum ID (index) number
SLURM_ARRAY_TASK_COUNT	total number of tasks in a job array

Job dependencies

sbatch -d | --dependency=<dependency_list>

Defer the start of this job until the specified dependencies have been satisfied completed.

<dependency_list> is on the form <type :jobID[:jobID][,type :jobID[:jobID]]>

Example :

sbatch --dependency=afterok:6265 HELLO.job

Type	Correspondance
after	this job can begin execution after the specified jobs have begun execution
afterany	this job can begin execution after the specified jobs have terminated
afterok	This job can begin execution after the specified jobs have successfully executed (ran to completion with an exit code of zero)
afternotok	This job can begin execution after the specified jobs have terminated in some failed state (non-zero exit code, node failure, timed out, etc)

--format option

Some commands (like **sacct** and **squeue**) give the possibility to **tune output format** :

Example :

```
sacct --format=jobid%-13,user%-15,uid,jobname%-15,state%20,exitcode,Derivedexitcode,nodelist% -X -job 6969
```

JobID	User	UID	JobName	State	ExitCode	DerivedExitCode	NodeList
6969	root	0	toto	COMPLETED	0:0	0:0	node[101-102]

```
squeue --format="%10i %12u %12j %.8M %.8l %.10Q %10P %10q %10r %11v %12T %D %R" -S "T"
```

JOBID	USER	NAME	TIME	TIME_LIM	PRIORITY	PARTITION	QOS	REASON	RESERVATION	STATE	NODES	NODELIST(REASON)
6612	root	bash	16:09	4-00:00:00	1	workq	normal	None	(null)	RUNNING	2	node[101-102]
6542	dgorecki	TurboVNC	1-06:27:44	UNLIMITED	1	interq	normal	None	(null)	RUNNING	1	genoview

These useful scripts are already in your default path or **/tools/bin**

- **saccount_info <login>**: account expiration date and last password change date, primary and secondary Linux group, groups' members, Slurm limits, CPU Time ...
- **sq_long or sq_debug**: squeue long format
- **sa_debug**: sacct long format
- **squota_cpu**: see your CPU time limit.
- **seff <jobid>**: check the efficiency of your terminated job (cpu, memory)

Job array

<https://genotoul-bioinfo.pages.mia.inra.fr/linux-cluster/cluster/tp3/>

Or (if it doesn't work)

Best practices

Security

One user = one account

You are responsible of the damage caused by your login.

Default permissions directories

- **home, save and work** : Read, Write, eXecution for the owner, Read and eXecution for all (drwxr-xr-x)

To change permissions: **chmod** command

Best practices

Resources

Cluster is a shared resource, so ... think about the others

Try to adapt requested resources to your needs

DO NOT run data treatment on frontal servers:

Why ?

- overloading frontal servers slow down everyone
- overloading frontal servers can provoke crash and block everyone
- save time for the administrators to answer support requests

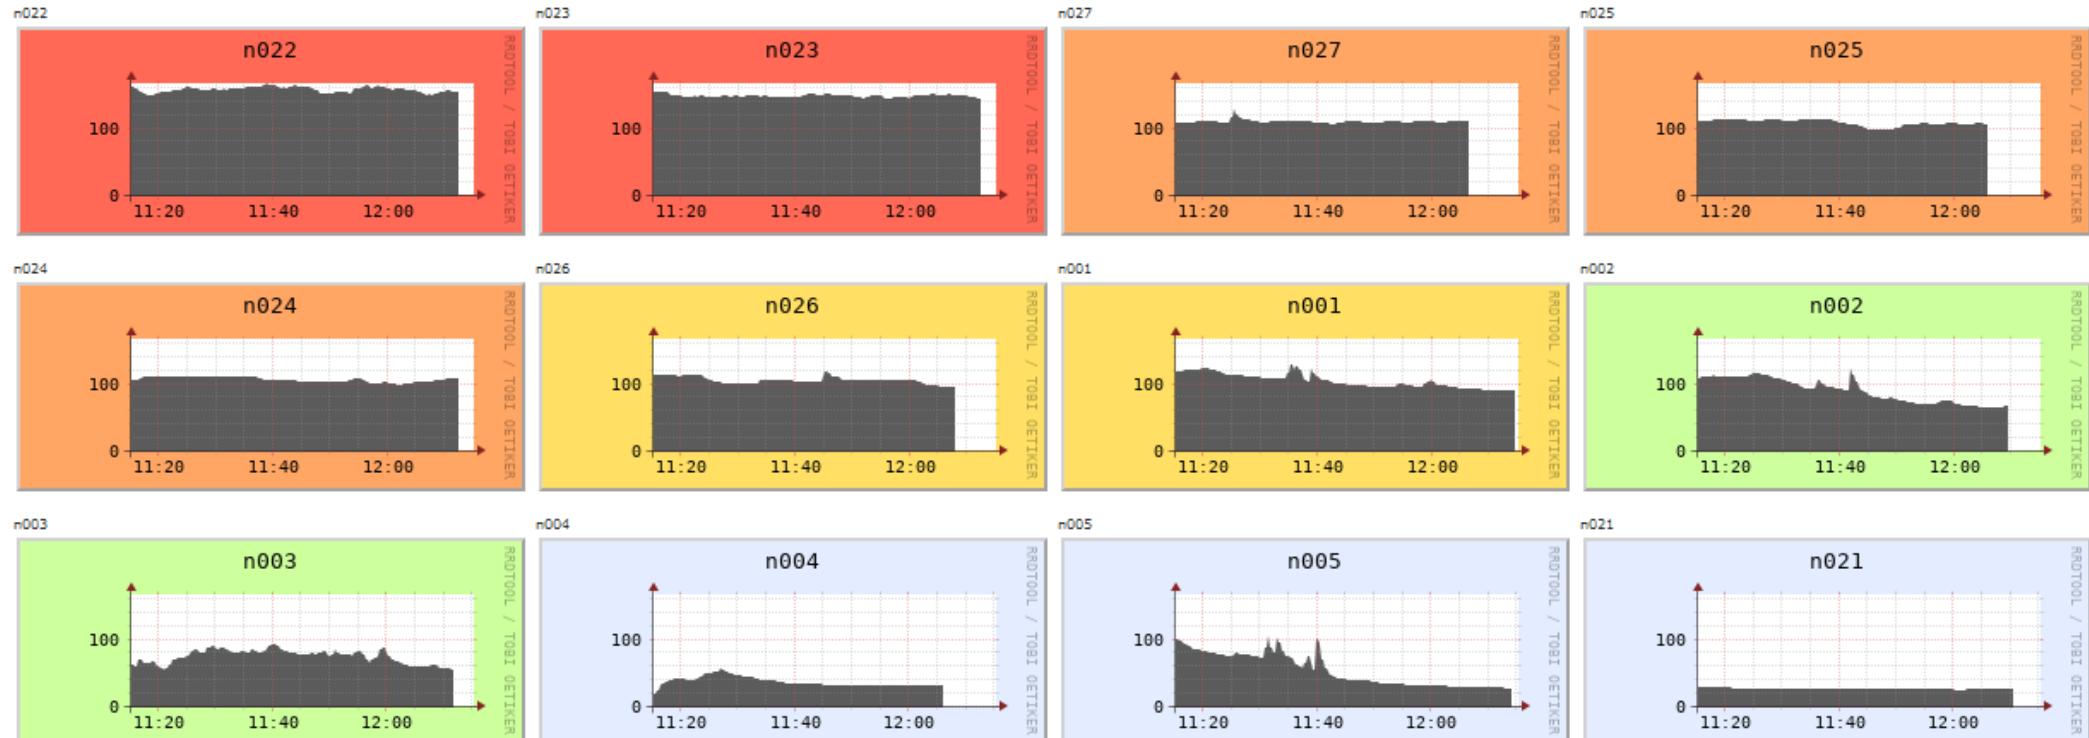

Check your process on frontal servers : **\$ pstree -u <login>**

Any data treatment launched on the frontal servers may be killed

Support
